

The EverSuite report management solution

ES-COLD is an electronic storage and instantaneous retrieval solution for reports and system-generated documents, ensuring compliance with legal obligations.

Business challenges

Within Enterprise Content Management processes, hardcopy output of print streams from line-of-business systems (such as purchase orders, customer invoices, pay slips, delivery notes, accounting statements, etc.) involves three main challenges: high-volume archiving of these documents, the need to be able to retrieve them quickly, and compliance with legal storage and conservation obligations.

EverSuite COLD automatically processes existing formatted report streams in order to extract and index the relevant data. It stores the files on multiple storage media, guaranteeing their legal value and making documents accessible via a web interface by dynamically recomposing the original stream.

Cat	Description	Pa Unitaire	Montant HT

ES-COLD's added value

Use ES-COLD for:

- Archiving high-volume report streams, in compliance with your company's legal obligations.
- On-line query and retrieval of archived documents.
- Aggregating reports to generate one composite document from a single search of multiple reports

- Reduce print stream storage by up to 80%
- Instant access to archived reports online
- Dynamically recreate your original streams in PDF format using "PDF on Demand" technology
- Guarantee the legal value of archived documents
- A web-based solution for simplified rollout

Automatic stream processing

Print streams filtering consists of interpreting a document's formatting check codes. As a standard feature, **ES-COLD** includes filters that automatically process the major print stream formats such as AS/400, PCL5, AFP, PDF, etc.

Automatic extraction, data check, indexing and storage of the meta-data for each specific spool file, such as date, customer number, or invoice number, which are used subsequently for consultation.

Multiple-media archiving of processed streams and associated overlay in compressed TXT format. The choice of media depends on your legal document archiving and conservation obligations.

Final validation enabling deletion of unprocessed spool files and temporary working files.

All these function settings may be modified within the **ES-COLD** automation module, which triggers each operation as the process progresses. Checks are performed to ensure data coherence and an event log is generated.

Document retrieval

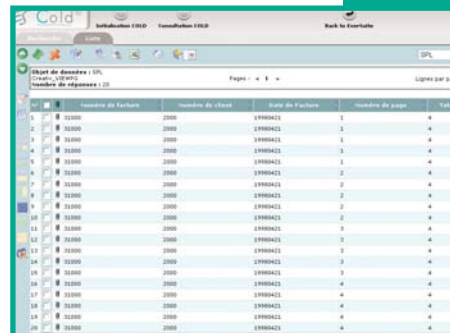

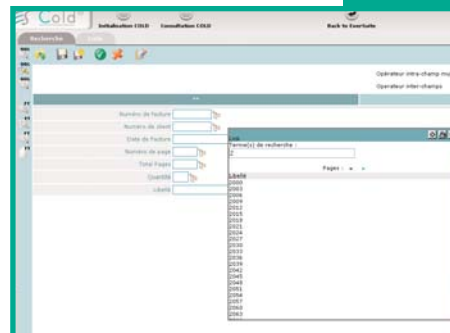

Users can search for, query and retrieve the print stream data stored in **ES-COLD** via a simple Web interface:

- Simple, form-based search by meta-data
- Access by browsing data folders
- Retrieval identical to the original of all or part of the document: on-the-fly merging of both streams and overlays
- Export, email transmission, and printing of a batch of responses

Comprehensive management of access rights enables you to monitor data access.

A scaleable offer

Built on the EverSuite Enterprise Content Management infrastructure, **ES-COLD** enables you to easily add supplementary EverSuite solutions and services, including electronic documents and folders management, email management, archives and records management, Business Process Management, web content management, portal.

Based on the EverSuite infrastructure, ES-COLD combines the same innovative technical characteristics:

- A software solution based on industry standards: J2EE, XML, JDBC, SOA
- Ease of integration into your company's information system
- LDAP directory connector
