

Content management for your business

Corporate profile

The leading European Enterprise Content Management (ECM) software vendor

The EVER Group offers a broad spectrum of applications ranging from the management of customer files to the management of museum and heritage collections, thanks to the functions of content production, capture, processing, filing and archiving. This allows private and public organizations to exploit and reuse their data capital and make this capital available to their own clients, partners and employees.

EVER is the first French software vendor to feature in the “Magic Quadrant” of ECM solutions, published by the Gartner Group, one of the leading consultancies specializing in the information technology industry. This inclusion is a genuine recognition of both the comprehensiveness and the quality of EVER’s offering and the company’s ability to implement it. Formed in 1990, EVER has over 160 employees, including an R&D team based in France, and realized a turnover of over 16 million euros in 2007, a third of which came from international operations via subsidiaries in Spain, UK and the Middle East and a large network of integration and distribution partners. The Group’s software solutions have been deployed on over 1600 sites worldwide.

The EVER offering : a dual approach - platform and business solutions

EVER provides its clients and system integrator partners with a service-oriented ECM platform. Offering a genuine environment for service-oriented architecture (SOA) development, the EverSuite platform enables the deployment of personalised and multilingual applications. It is available in two complementary software product lines: EverSuite and Flora. Based on the ECM platform, the EverSuite ECM solutions offer a modular and integrated software suite that comprises all the features required of an ECM system:

- ES Capture for document capture,
- ES Content Management for content and business process management,
- ES Portal for online publication,
- ES Collaboration Space for collaboration work,
- ES Compliance for electronic archiving implementing legal compliance.

EVER also offers business oriented ECM solutions, EverSuite for Enterprise Content Management and Flora for cultural and heritage document management.

With EverSuite, EVER offers you open and packaged solutions to meet a variety of business needs such as electronic customer files management (assets & legacy, insurance), unified management of technical and customer files in industry, informing citizens or industrial and environmental risk management.

Flora provides a suitable response for a market where the trend is towards the convergence of documentation, records management and information heritage. Flora helps to place the Document Information System at the heart of the organization, with a single common platform for information documentation, media libraries, territorial archives or museums and conservation areas.
